US West Communications, Inc.’s
Compliance with Certain Wholesale
Pricing Requirements for Unbundled
Network Elements and Resale
Discounts

Docket No: T-00000A-00-0194
Phase II A

APPLICATION FOR
REHEARING

Pursuant to A.R.S. §40-253 and A.A.C. R14-3-111, WorldCom, Inc., on behalf of
its operating affiliates (“WorldCom”) respectfully applies for a rehearing of ACC Decision
No. 65451. Specifically, WorldCom requests that the Arizona Corporation Commission
(“Commission”) require that Qwest continue to provide operator services and directory
assistance (“OS/DA”) as a UNE at TELRIC pricing until such time as Qwest can provide
custom routing over Feature Group D (“FGD”) trunks.

The issue is whether the Arizona product Qwest calls “custom routing” relieves
Qwest of its obligation to provide OS/DA as a UNE even though Qwest’s “custom
routing” product does not use FGD as requested by WorldCom. The FCC provides that
custom routing must be provided over trunk groups designated by the requesting carrier
(i.e. WorldCom). Yet, Decision No. 65451 allows Qwest to escape offering OS/DA as a
UNE by offering a useless alternative product that Qwest calls custom routing but that is
not what the FCC requires nor what WorldCom designated. It is a ruse designed to
increase the costs of Qwest’s competitors.

Custom routing allows WorldCom to provide OS/DA directly to its customers. As
allowed by the FCC, WorldCom has designated that custom routing be carried over
existing FGD trunks. Qwest claims it cannot provide OS/DA routing over FGD trunks.
While WorldCom disagrees with Qwest’s claim, technical feasibility is not relevant to this
application for rehearing. For purposes of this application only, WorldCom will assume
that at this time Qwest currently cannot provide OS/DA routing over the FGD trunks
designated by WorldCom. As a result, under the pertinent FCC rulings, Qwest is not
offering WorldCom customized routing and, therefore, Qwest must continue to provide
OS/DA as a UNE at TELRIC prices. Other states and the FCC have recognized this
dilemma and required the ILEC to continue to provide OS/DA as a UNE until it can
provide custom routing over the trunks designated by WorldCom. At a minimum, the
Commission should modify its order to require Qwest to provide custom routing over
FGD trunks once the Commission decides, or the parties agree, that it is technically
feasible. Decision No. 65451 should not be used by Qwest to forever be excused from
providing custom routing over FGD trunks.

During the December 9, 2002 Open Meeting, Qwest confused the issue by claiming
WorldCom’s position related to technical feasibility and whether TELRIC pricing required
use of emerging technologies. Reporters Transcript of Proceedings, Agenda Item 3,
December 9, 2002 Special Open Meeting, pp. 91:16-97:3. These are not the issues raised by this Application. The issue is not the technical feasibility nor pricing of the custom routing, but whether Qwest must continue to provide OS/DA as a UNE until it can provide custom routing over the FGD trunks designated by WorldCom.

Custom routing is a software function of the Qwest switch that allows a CLEC’s customer’s call to be switched to a trunk that will carry the call to WorldCom’s OS/DA provider. Custom routing is essential if CLECs such as WorldCom are to provide OS/DA and not be dependent on Qwest for such services. Custom routing can only be made available on a viable basis if the customer calls are routed over existing shared FGD trunks. There is capacity on these trunks to carry to OS/DA calls. Qwest’s purported “custom” routing product requires WorldCom to purchase new, dedicated FGC trunks solely to convey the OS/DA traffic. That is like being forced to rent a second U-Haul truck for an extra piece of furniture when you have sufficient space in an existing U-Haul truck that you are already renting.

In Phase I of this case, Qwest proposed to offer OS/DA at retail prices that effectively preclude its use by CLECs. The Commission saw through this anti-competitive ploy and ordered Qwest to provide OS/DA as a UNE at a TELRIC price pending the custom routing decision in this Phase II A. (See A.C.C. Decision No. 64922, p. 61:15-18). If the Commission now accepts Qwest’s Phase II A custom routing proposal requiring the use of dedicated trunks (i.e., FGC trunks) as satisfying the FCC customized routing requirement, CLECs will lose OS/DA as a UNE and only be offered a useless,
costly alternative. The Minnesota, Texas and Washington Commissions have recognized this problem and required that Qwest and SWB, respectively, continue to provide OS/DA as a UNE at a TELRIC price until they can provide custom routing as requested by the CLEC. (See Texas PUC Arbitration Award, Docket No: 24542, §§ 22 and 25 ("Custom routing, by definition, must permit requesting carriers to designate the particular outgoing trunks ... the arbitrators therefore reject Southwestern Bell’s claim that by providing customized routing through Feature Group C it has satisfied the customized routing requirement"); Minnesota PUC Findings of Fact, Conclusions of Law and Recommendation, Docket No. 12-2500-14485-2, May 8, 2002; Washington Utilities and Transportation Commission, Forty-First Supplemental Order; Part D Initial Order; Establishing Nonrecurring and Recurring Rates for UNEs, Docket No. UT-003013, pp. 45-52, October 11, 2002). The FCC also required Verizon to reflect in its interconnection agreement its commitment to provide customized routing for OS/DA calls over WorldCom’s Feature Group D trunks and to provide OS/DA as a UNE until FGD custom routing is implemented. 1 Copies of the pertinent portions of these decisions are attached.

The FCC specifies that requesting CLECs are entitled to designate the trunks on which the ILEC must route OS/DA traffic:

Customized routing permits requesting carriers to designate the particular outgoing trunks associated with unbundled switching provided by the

1 In re Petition of WorldCom, Inc., Pursuant to Section 252(e)(5) of the Communications Act, for Preemption of the Jurisdiction of the Virginia State Corporation Commission Regarding Interconnection Disputes with Verizon Virginia Inc., and for Expedited Arbitration, CC Docket No. 00-218, Memorandum Opinion and Order, DA 02-1731 (rel. July 17, 2002).
incumbent, which will carry certain classes of traffic originating from the requesting provider’s customers. This feature would allow the requesting carrier to specify that OS/DA traffic from its customers be routed over designed trucks which terminate at the requesting carrier’s OS/DA platform or a third party’s OS/DA platform.² (emphasis added)

The FCC’s definition of customized routing provides that WorldCom, and not Qwest, is entitled to designate the trunks on which Qwest will route WorldCom’s OS/DA traffic. Qwest has no right to decide that WorldCom must establish separate FGC trunks.³

Nevertheless, on page 23 of his August 31, 2001 testimony, Qwest witness Mr. Brigham states that Custom Routing combines End Office ("EO") switching with dedicated trunks to allow CLECs the ability to request specific traffic routing direction by class of service via a unique Line Class Code ("LCC"). In Section B, Description Of Service on page 3 of the Cost Study (WorldCom Hearing Exhibit 2), Qwest again states that Custom Routing will combine EO switching with dedicated trunks.

Mr. Brigham is mistaken in his characterization that dedicated trunks must be employed in order for Qwest to provide Custom Routing. As the carrier requesting custom routing, WorldCom is entitled to designate the particular outgoing trunks associated with custom routing provided by Qwest that will carry OS/DA traffic.

³ Id. ¶ 226.
originating from WorldCom's customers. This will allow WorldCom to provide OS/DA to its customers using its own operators. Edward F. Caputo Rebuttal Testimony, p.4.

Using existing FGD trunks is important because it allows WorldCom to use a cost-efficient system of routing traffic rather than purchasing an individual trunk between Qwest's switch and the WorldCom network just to handle OS/DA traffic. It allows WorldCom to route that traffic across trunks that WorldCom already shares with Qwest. Qwest seeks to substantially increase WorldCom's expense in providing this service by requiring a separate trunk for directory assistance and another separate trunk for operator services. Transcript, p. 211:6 - 14. It is vital for competition that WorldCom be able to provide OS/DA services directly to its own customers using its own operators. Transcript, pp. 416:10 - 417:10.

Qwest is legally required to provide custom routing over WorldCom's FGD trunks. The FCC and other states have recognized this obligation. Qwest's insistence that custom

While not at issue in this Application, it is technically feasible to route both operator and directory assistance calls across shared access Feature Group D trunks. WorldCom has been doing it on its own facilities since 1997 and has provided documentation to all the RBOCs, including Qwest, describing how the Lucent 5-ESS switch, the Nortel DMS-100 or 500 switch and Siemens switches support that type of routing. Transcript, pp. 417:1-418:7. WorldCom has actually performed that type of customized routing in its own labs and had conducted technical trials with Pacific Bell that demonstrate it can be done. Transcript, p. 418:8 - 15. Interestingly, in Washington, the evidence indicated that custom routing as requested by WorldCom is technically feasible but for business reasons Qwest will not provide it. Washington Utilities and Transportation Commission, Forty-First Supplemental Order, ¶176.
routing must be provided on dedicated trunks violates the Act and FCC orders, including section 251(c)(3), which requires ILECs to provide nondiscriminatory access to network elements.

WorldCom respectfully requests that the Commission reconsider its decision and modify Decision No. 65451 to require Qwest to continue to provide OS/DA as a UNE at TELRIC pricing until such time as Qwest can provide custom routing across FGD trunks, or, at a minimum, clarify that Qwest must provide custom routing over FGD trunks as soon as the Commission determines, or the parties agree, that it is technically feasible.

WorldCom also takes exception to the Commission’s adoption of Qwest’s proposed fill factors. The Commission adopted Qwest’s proposal for a fill rate of approximately 80% which is significantly below the rate used in the HAI model and approved by the FCC in the Inputs Order. The HAI model rate was also recommended by the Arbitrators who presided over the evidentiary hearing. Qwest’s proposed utilization rate, adopted by the Commission, does not comport with TELRIC principles because the result of such a low fill factor would be subsidization of future customers by current customers. Moreover, using the current generation of digital switches, Qwest should be capable of achieving the higher fill factor used in the HAI model. WorldCom respectfully requests that the Commission grant a rehearing and adopt the Arbitrators’ and HAI recommended fill factor.
RESPECTFULLY SUBMITTED this 2\textsuperscript{nd} day of January, 2003.

VI. CONCLUSION ............................................................................................................................... 245
The Arbitrators also reject SWBT's proposed new sections 9.5.5.1 and section 16 – Compensation Option. These proposed sections appear to create an optional multi-state compensation arrangement for LIDB and CNAM queries. The Arbitrators find no compelling reason to include such provisions in this interconnection agreement at this time.

**DPL ISSUE NO. 22**

**SWBT:** Is SWBT required to provide MCIm access to proprietary AIN features developed by SWBT?

**CLECs:** Should SWBT be required to provide MCIm access to proprietary AIN features developed by SWBT?

**CLECs' Position**

MCIm asserted that SWBT should be required to provide MCIm access to proprietary advanced intelligent network (AIN) features developed by SWBT. MCIm stated that with proprietary network elements, the FCC's standard is whether the element is necessary to CLECs, and that in this instance the answer is yes. MCIm stated that AIN functionalities are those built into SWBT's legacy voice network that allow parties to configure the network in unique ways. MCIm offered, as an example, that some CLECs use AIN functionalities to route operator service and directory assistance (OS/DA) calls to the CLEC's own OS/DA network. MCIm asserted that access to these AIN functionalities is necessary to a CLEC's reasonable network development, particularly given SWBT's refusal to provide alternatives (e.g. customized routing for OS/DA) in a manner that is practical for the CLEC. MCIm further stated that the ability of CLECs to use AIN features permits the CLEC to use "all other features that the switch is capable of providing," as required by the FCC's 319 rules.

MCIm argued that while SWBT noted that the FCC has already found that proprietary AIN features are not UNEs, the FCC's conclusion is not binding on the Commission. MCIm argued that the Commission has authority under 47 C.F.R. § 51.317 to independently unbundle

---

822 MCIm Exh. No. 1, Price Direct at 60.
823 MCIm Exh. No. 1, Price Direct at 60.
824 MCIm Exh. No. 1, Price Direct at 60-61.
proprietary AIN features.\textsuperscript{826} MCIm also argued that some AIN features—such as number portability and customized routing—are not proprietary.\textsuperscript{827} MCIm argued that even with SCE, MCIm would not have the capability to duplicate customized routing, therefore SWBT should not be able to claim that that functionality is proprietary.\textsuperscript{828} MCIm explained that it is proposing to adopt the language in the MCI WorldCom Agreement as is, which provides for use of SWBT’s AIN, and that SWBT is the one requesting contract changes.\textsuperscript{829}

**SWBT’s Position**

SWBT argued that ILECs should not be required to unbundle AIN service software. SWBT asserted the FCC determined in the *UNE Remand Order* that AIN service software such as “Privacy Manager” is proprietary, and does not meet the “necessary and impair” standard of FTA § 251(d)(2)(A).\textsuperscript{830} SWBT contended that MCIm’s arguments fail to demonstrate that the AIN software meets the “necessary” standard required for unbundling.\textsuperscript{831} SWBT added that MCIm does not dispute the proprietary nature of SWBT’s AIN software.\textsuperscript{832}

SWBT argued MCIm claimed it should have access to SWBT’s AIN because of FCC Rule 319, which provides that CLECs may utilize features, functions, and capabilities of the switch.\textsuperscript{833} SWBT argued that MCIm’s reference to FCC Rule 319 is misleading, because MCIm’s AIN features are separate from what the switch provides. SWBT explained that AIN features are implemented as a result of AIN proprietary software providing instructions to the SWBT switch. In other words, the switch does not provide AIN capabilities; the AIN software provides the AIN capabilities.\textsuperscript{834} SWBT further argued that its AIN service software is

\textsuperscript{834} SWBT Exh. No. 13, Kirksey Rebuttal at 13.
developed through the “intellectual effort” of SWBT employees for use by SWBT customers, and is therefore proprietary.835

SWBT claimed that MCIm argues the unbundling of AIN is necessary because SWBT does not offer alternatives such as customized routing of OS/DA. SWBT contended that it does offer customized routing of OS/DA.836 SWBT added that customized routing would utilize software developed by SWBT for MCIm as opposed to SWBT’s proprietary AIN software. However, SWBT stated that it offers OS/DA via AIN.837 SWBT argued that it gave up certain concessions as part of the T2A, and this is one of them; therefore, SWBT explained that it is negotiating a contract outside of the T2A and is proposing new language.838

**Arbitrators’ Decision**

The Arbitrators do not concur with SWBT’s assertion that all AIN-based features are excepted from unbundling by the UNE Remand Order. The specific language used by the FCC and relied upon by SWBT pertains only to databases used to provide “services similar to Privacy Manager.”839 SWBT offered no evidence on which the Arbitrators could rely to distinguish the types of AIN-based services that are similar to Privacy Manager. Therefore, the Arbitrators find that, on this record, it is impossible to conclude that the services in question are excused from the unbundling requirements established in the UNE Remand Order.

Even if SWBT adduces evidence showing, and the Commission concludes, that the services in question are proprietary, SWBT must continue to provide such services on an unbundled basis. The UNE Remand Order requires an ILEC to provide a requesting carrier the same access to design, create, test, and deploy AIN based services at the Service Management System (SMS), through a service creation environment (SCE) that the ILEC provides to itself, consistent with FTA § 222.840 The Arbitrators find that SWBT has failed to prove that it provides

840 UNE Remand Order at 412.
the required access. To the contrary, SWBT implicitly conceded that it does not provide the required access, and has instead agreed that "...access will be provided."

Therefore, the Arbitrators adopt the language as proposed by MCIm for sections 9.7, 9.7.3, and 9.7.4. The language shall remain in effect and SWBT shall provide the subject services on an unlimited basis until SWBT initiates a proceeding with the Commission for the purpose of showing both that subject services are proprietary, and that SWBT provides the required nondiscriminatory access to the SMS through an SCE. This process allows all interested parties to present evidence on what constitutes nondiscriminatory access to SCE and SMS that allows a CLEC to create and deploy its own AIN-based services. In addition, the Commission will be able to evaluate whether such access will degrade network integrity.

841 Joint Exh. No. 2, Joint DPL at 20 (citing Kirksey Direct at 13-15; Kirksey Rebuttal at 11-13).
Therefore, the Arbitrators conclude that SWBT shall continue to provide the DALI database as a UNE. The Arbitrators accordingly adopt MCIm’s proposed language.

**DPL ISSUE NO. 25**

**CLECs: Are CLECs impaired without access to OS and DA?**

**SWBT: Is SWBT required to provide OS and DA as UNEs, contrary to the UNE Remand Order?**

**CLECs’ Position**

*a. MCIm*

MCIm defined Operator Services (OS) as any automatic or live assistance to a customer to arrange for billing and/or completion of a telephone call.871 MCIm stated that ILECs are required to allow customers to connect with their chosen local service provider by dialing “0” plus the desired telephone number.872 MCIm defined Directory Assistance (DA) as a service in which users are provided with the numbers and sometimes addresses of telephone exchange service subscribers who have not elected to have unpublished numbers.873 MCIm argued that to provide OS/DA to its customers, it could either purchase OS/DA from SWBT or provide its own OS/DA.874 MCIm asserted that it is dependent upon SWBT to route MCIm’s UNE-P customers’ OS/DA calls to MCIm’s OS/DA facilities.875

MCIm stated that the FCC’s *UNE Remand Order* requires an ILEC to continue to offer OS/DA as a UNE when the ILEC does not provide customized routing.876 MCIm contended that SWBT has not shown that it will be able to provide customized routing to MCIm for MCIm’s OS/DA calls. MCIm stated that it requested SWBT to route MCIm’s OS/DA traffic to existing shared-access Feature Group D trunks between SWBT’s local network and WCOM’s (MCIm’s

---

871 MCIm Exh.No. 7, Caputo Direct at 3.
872 MCIm Exh.No. 7, Caputo Direct at 3.
873 MCIm Exh.No. 7, Caputo Direct at 4.
874 MCIm Exh.No. 7, Caputo Direct at 4.
875 MCIm Exh.No. 7, Caputo Direct at 4.
876 MCIm Exh.No. 7, Caputo Direct at 6.
parent company) long distance network.\textsuperscript{877} MCIm defined “Feature Group D” trunks as industry-standard trunks put into place after divestiture to allow competitive long distance to provide service.\textsuperscript{878} MCIm asserted that it is technically feasible for a CLEC to use Feature Group D functionalities to route OS/DA traffic to its facilities-based OS/DA platform.\textsuperscript{879}

MCIm asserted that it proposed a customized routing solution to SWBT that uses line class codes and standard switch table routing features and functions to meet MCIm’s business needs.\textsuperscript{880} MCIm claimed that its proposal to use Feature Group D allows MCIm to designate the outgoing trunks provided by SWBT and meets the requirements set out in the \textit{UNE Remand Order}.\textsuperscript{881} MCIm contended that until SWBT actually provides customized routing to MCIm in a manner consistent with the FCC’s rules, paragraph 462 of the \textit{UNE Remand Order} requires SWBT to continue to offer OS/DA as UNEs.\textsuperscript{882}

MCIm stated that although SWBT’s proposed language indicates that customized routing will be made available to MCIm through Advance Intelligent Network (AIN) capabilities, MCIm has not received any indications that SWBT can provide the type of customized routing MCIm requested.\textsuperscript{883} MCIm stated SWBT has advised MCIm that SWBT would provide customized routing only to the extent that MCIm establishes Feature Group C trunks to each end office from which MCIm seeks origination of OS/DA traffic. MCIm argued that SWBT’s proposal is inconsistent with the FTA and with the \textit{UNE Remand Order}, because MCIm would not have the ability to designate the particular outgoing trunks for routing its outbound traffic.\textsuperscript{884}

MCIm contended that the FCC’s approval of SWBT’s 271 applications does not prove that SWBT provides customized routing to MCIm for MCIm’s OS/DA calls according to MCIm’s needs and the FCC rules.\textsuperscript{885} MCIm further argued that because it is requesting shared

\begin{itemize}
\item \textsuperscript{877} MCIm Exh.No. 7, Caputo Direct at 6.
\item \textsuperscript{878} MCIm Exh.No. 7, Caputo Direct at 6.
\item \textsuperscript{879} MCIm Exh.No. 7, Caputo Direct at 6.

\item \textsuperscript{883} MCIm Exh.No. 7, Caputo Direct at 7.
\item \textsuperscript{884} MCIm Exh.No. 7, Caputo Direct at 7.
\item \textsuperscript{885} MCIm Exh.No. 8, Caputo Rebuttal at 4.
\end{itemize}
access, Feature Group D routing of its calls during this proceeding, SWBT must offer OS/DA as a UNE to MCIm at least until SWBT provides this customized routing arrangement. 886

MCIm argued that the Commission may require SWBT to continue to provide OS/DA as a UNE if the Commission concludes that CLECs are impaired without access to OS/DA. 887 MCIm contended that CLECs are impaired because they are unable to provide ubiquitous OS/DA to Texas consumers because SWBT has not shown that it can implement a workable customized routing solution. 888

b. Sage Telecom

Sage argued that it does not currently have customized routing for OS/DA. Sage contended that it is not interested in pursuing this option because it would require dedicated transport through SWBT’s network which would increase its costs and investments required for a small amount of traffic. 889 Sage argued that it would be required to withdraw the OS/DA service from a large number of users and locations. 890

c. UNE-P Coalition, AT&T, and McLeodUSA Telecommunications Services

The UNE-P Coalition argued that the FCC determined that ILECs could remove OS/DA services from the list of mandatory network elements only if the ILEC implemented customized routing to enable CLECs to direct OS and DA traffic to alternative providers. 891 The UNE-P Coalition stated that SWBT’s offer of customized routing requires each CLEC to establish dedicated transport network at each of SWBT’s five hundred central offices, and because CLEC’s entering the market generally only win a small percentage of the market at any particular switch, these entrants will not have the OS/DA traffic volumes necessary to justify such a large interoffice network. 892 The UNE-P Coalition argued that SWBT’s requirement that CLECs establish dedicated trunk groups before using alternative providers of OS/DA services

886 MCIm Exh. No. 8, Caputo Rebuttal at 5;
887 MCIm Exh. No. 7, Caputo Direct at 8.
888 MCIm Exh. No. 7, Caputo Direct at 9.
889 Sage Telecom Exh. No. 1, Nuttall Direct at 46.
890 Sage Telecom Exh. No. 1, Nuttall Direct at 46.
imposes a substantial impairment on the CLECs ability to compete.\textsuperscript{893} The UNE-P Coalition contended that because there is no practical alternative to the ILEC’s OS/DA service, the UNE-P provider must have the ability to purchase these services as network elements.\textsuperscript{894} The UNE-P Coalition concluded, therefore, that the Commission should continue to require SWBT to offer OS/DA as network elements until SWBT can demonstrate that it has implemented an efficient aggregation scheme and entrants can custom route and transport OS/DA to alternative providers without impairment.\textsuperscript{895} The UNE-P Coalition added that the Commission has independent authority to require additional unbundling and additional flexibility to consider other factors under the FCC rules.\textsuperscript{896}

\textit{SWBT’s Position}

SWBT defined Operator Services as the means of getting assistance during a call from either an automated program or a live operator and Directory Assistance as ‘calling information’ such as dialing 1411 to acquire a telephone number from DA.\textsuperscript{897} SWBT stated that in the \textit{UNE Remand Order}, the FCC determined that where an ILEC provides customized routing of OS/DA, the ILEC is not required to provide OS/DA Service as unbundled network elements.\textsuperscript{898} SWBT stated that SWBT offers customized routing of OS/DA in order for the SWBT switch to direct the calls to MCIm or MCIm’s third party provider. SWBT contended that the customized routing is provided in the same manner in which SWBT self-provisions.\textsuperscript{899}

SWBT acknowledged that it committed to providing OS/DA as UNEs to CLECs for residential customers through the end of the T2A.\textsuperscript{900} SWBT stated, however, that the T2A was approved prior to the effective date of the \textit{UNE Remand Order}.\textsuperscript{901} SWBT contended that after

the *UNE Remand Order* became effective, SWBT has offered OS/DA services at market-based prices, pursuant to FTA § 251(b)(3).\(^{902}\) SWBT stated that the FCC approved SWBT’s 271 applications in Arkansas, Kansas, Missouri, and Oklahoma, in which SWBT offers OS and DA services at market prices rather than as UNEs.\(^{903}\) SWBT concluded that the FCC’s actions confirmed that SWBT is not obligated to provide OS, DA, or DLI as UNEs.\(^{904}\)

**Arbitrators’ Decision**

The *UNE Remand Order* requires ILECs to unbundle their OS/DA services, unless the ILEC provides customized routing to a requesting carrier to allow it to route traffic to alternative OS/DA providers.\(^{905}\) Customized routing, by definition, must permit requesting carriers to designate the particular outgoing trunks associated with unbundled switching provided by the incumbent.\(^{906}\) The Arbitrators therefore reject SWBT’s claim that, by providing customized routing through Feature Group C (FGC) trunks, it has satisfied the customized routing requirement.\(^{907}\) As the FCC observed, CLECs are impaired without accommodating technologies used for customized routing. Therefore, to the extent ILECs have not accommodated technologies for customized routing, they must offer OS/DA as a UNE.\(^{908}\)

In this arbitration, MCIm requested customized routing through Feature Group D (FGD) trunks.\(^{909}\) MCIm, Sage, and the UNE-P Coalition adduced evidence that provisioning OS/DA in the manner proscribed by SWBT (via FGC) is prohibitively costly.\(^{910}\) Sage presented unrebutted evidence that the higher cost would result in Sage being unable to provide OS/DA to its customers under FGC.\(^{911}\) The Arbitrators therefore conclude that SWBT has not met the

condition precedent of providing customized routing that accommodates technologies specified by the CLEC, and therefore OS/DA should remain a UNE.

The Arbitrators' decision does not imply that, if SWBT were to offer customized routing using Feature Group D, SWBT would then be automatically authorized to discontinue offering OS/DA services as a UNE. The FCC's analysis of whether OS/DA services should be offered as a UNE included an assessment of the availability of third party vendors to offer OS/DA services.912 The FCC concluded that a CLEC would not be materially diminished without access to OS/DA from an ILEC on an unbundled basis in part because, at the time the UNE Remand Order was issued, there were a substantial number of regional and national alternative providers of OS/DA.913 Changes have occurred in the telecommunications market since the FCC issued the UNE Remand Order, and the Arbitrators observe that these changes may include far fewer choices of third-party vendors for OS/DA.914 In addition, the Arbitrators agree with the Coalition's claim that requiring a new entrant that operates in a limited area to establish customized routing to all locations potentially poses a barrier to entry by increasing the cost of entry.

The Arbitrators conclude that SWBT shall continue providing OS/DA services as an unbundled network element until SWBT initiates a proceeding before the Commission to demonstrate that it has met the customized routing requirements necessary to cease offering OS/DA as UNEs. This process will allow all interested parties to present evidence on whether SWBT has provided customized routing and if necessary, allow the Commission to consider evidence regarding whether CLECs would be impaired in Texas without access to OS/DA from SWBT on an unbundled basis.

Therefore, the Arbitrators adopt MCIm's proposed interconnection agreement language for section 7 of Attachment 6 – UNE, GTC 49.1, DA Attachment 22, and OS Attachment 23. The Arbitrators also adopt SWBT’s proposed section 1.4 of Attachment 6 – UNE, which appears to be primarily descriptive and accurate. The Arbitrators discuss proposed section 2.2 of Attachment 6 – UNE in DPL Issue No. 9.

DPL ISSUE NO. 25A

CLECs: Is there competitive merit, and is it in the public interest, for OS and DA to be available as network elements?

SWBT: Is SWBT required to provide OS and DA as UNEs, contrary to the UNE Remand Order?

CLEC’s Position

See discussions DPL Issue No. 25.

SWBT’s Position

See discussions DPL Issue No. 25.

Arbitrators’ Decision

The Arbitrators find that it is in the public interest and there is competitive merit for OS and DA to be made available as unbundled network elements throughout the state of Texas.915 As discussed in connection with DPL Issue No. 8A, PURA § 60.021 requires an ILEC to unbundle its network to the extent the FCC orders, at a minimum. PURA § 60.022(a) allows the Commission to adopt an order relating to the issue of unbundling of local exchange company services in addition to the unbundling required by § 60.021. PURA § 60.022(b) requires the Commission to consider the public interest and competitive merits before ordering further unbundling. Additionally, Commission SUBST. R. 26.272(a) requires the Commission to ensure that all providers of telecommunications services interconnect in order that the benefits of local exchange competition are realized. In adopting this rule, the Commission determined that interconnection is necessary to achieve competition in the local exchange market and is, therefore, in the public interest. As discussed more fully in the Arbitrator’s decision in DPL Issue No. 8A, the Arbitrators believe that competitive merit can be measured as the net benefit to consumers, including the ability to choose alternative providers, lower prices, higher quality, and innovative service packaging due to the presence of competitive pressure.916

914 Tr. at 241-46 (Telecommunications acquisitions and bankruptcies have resulted in a smaller number of competitors and reduced capitalization).

915 The Arbitrators have addresses the issue as framed by SWBT in connection with DPL Issue No. 25.

916 Tr. at 335-40.
The Arbitrators find that SWBT is the only viable provider of OS and DA in Texas and that all CLECs in this proceeding rely exclusively on SWBT in providing OS and DA to their customers. The Arbitrators believe that the continued availability of OS and DA as a UNE will allow CLECs to create innovative product offerings, thereby fostering competition and continuing the benefit of customer choice in service providers and service packaging to a large geographic segment of the population. Additionally, the Arbitrators recognize that the telecommunications industry has changed significantly since the UNE Remand Order was issued with telecommunication acquisitions and bankruptcies resulting in a smaller number of competitors as well as a decrease in the overall market capitalization. Therefore, the Arbitrators find that there is competitive merit in requiring SWBT to continue offering OS and DA on an unbundled basis.

Further, the Arbitrators conclude that continued availability of OS and DA as UNEs is in the public interest due to the operational barriers and economic barriers of self-provisioning. As noted above, the Arbitrators find there is not yet any meaningful competition in providing OS and DA services in Texas. In addition, the record reflects an absence of the ability of any other CLEC to serve as a wholesale OS and DA alternative to SWBT. Finally, purchasing OS and DA in the manner proposed by SWBT is cost prohibitive, particularly for smaller CLECs. Therefore, the Arbitrators find that requiring OS and DA to be made available as a UNE in all zones of Texas, without restriction, has competitive merit and is in the public interest.

STATE OF MINNESOTA
OFFICE OF ADMINISTRATIVE HEARINGS
FOR THE MINNESOTA PUBLIC UTILITIES COMMISSION

In the Matter of a Commission Investigation Into Qwest's Compliance with Section 271(c)(2)(B) of the Telecommunications Act of 1996; Checklist Items 3, 7, 8, 9, 10, and 12

FINDINGS OF FACT, CONCLUSIONS OF LAW, AND RECOMMENDATION

This matter came on for hearing on March 4-6, 2002, by Administrative Law Judge Steve M. Mihalchick in the Large Hearing Room of the Minnesota Public Utilities Commission, 200 Metro Square Building, 121 East 7th Place, St. Paul, Minnesota. The record was closed March 29, 2002, upon receipt of post-hearing briefs. Administrative Law Judge Kathleen A. Sheeny assisted in preparation of this report.

Robert E. Cattanach and Shannon Heim, Dorsey & Whitney, 50 S. Sixth St., Minneapolis, Minnesota 55402; Mary Rose Hughes and Kelly Cameron, Perkins Coie, 607 14th Street NW, Washington, D.C. 20005; and Jason Topp, Qwest Corporation, 200 S. Fifth Street, Room 395, Minneapolis, Minnesota 55402, appeared on behalf of Qwest Corporation (Qwest).

Rebecca DeCook, 1875 Lawrence St., 15th Floor, Denver, Colorado 80202, appeared on behalf of AT&T Communications of the Midwest, Inc., AT&T Local Services on behalf of TCG Minnesota, and AT&T Broadband Phone Company of Minnesota, Inc. (collectively AT&T).

Gregory R. Merz, Gray, Plant, Mooty, Mooty & Bennett, 3400 City Center, 33 S. Sixth St., Minneapolis, Minnesota 55402, and Lesley Lehr, 638 Summit Avenue, St. Paul, Minnesota 55105, appeared for WorldCom, Inc. (WorldCom).

Ginny Zeller and Priti Patel, Assistant Attorneys General, Minnesota Attorney General's Office, 525 Park Street, Suite 200, St. Paul, Minnesota 55103, appeared for the Department of Commerce (the Department or DOC).

Cecilia Ray, Moss & Barnett, 90 S. Seventh St., Suite 4800, Minneapolis, Minnesota 55402, appeared for Ace Telephone Association; BEVCOMM, Inc.;
Encore Communications; HomeTown Solutions, LLC; Hutchinson Telecommunications, Inc.; Mainstreet Communications, Inc.; NorthStar Access, LLC; Otter Tail TelCom, LLC; Paul Bunyan Rural Telephone Cooperative; Tekstar Communications, Inc.; Unitel Communications; U.S. Link, Inc.; and VAL-Ed Joint Venture, LLP, d/b/a 702 Communications (collectively the CLEC Coalition).

Lillian Brion appeared on behalf of the staff of the Minnesota Public Utilities Commission.

NOTICE

Notice is hereby given that pursuant to Minn. Stat. § 14.61, and the Rules of Practice of the Public Utilities Commission and the Office of Administrative Hearings, exceptions to this report, if any, by any party adversely affected must be filed within 20 days of the mailing date hereof or such other date as established by the Commission’s Executive Secretary.

Questions regarding the filing of exceptions should be directed to Dr. Burl Haar, Executive Secretary, Minnesota Public Utilities Commission, Suite 350 Metro Square, 121 Seventh Place East, St. Paul, MN 55101. Exceptions must be specific and stated and numbered separately. Oral argument before a majority of the Commission will be permitted to all parties adversely affected by the Recommendation who request such argument. Such request must accompany the filed exceptions or reply, and an original and 14 copies of each document should be filed with the Commission.

The Minnesota Public Utilities Commission will make the final determination of the matter after the expiration of the period for filing exceptions as set forth above, or after oral argument, if such is requested and had in the matter.

Further notice is hereby given that the Commission may, at its own discretion, accept or reject the Administrative Law Judge’s Recommendation and that said Recommendation has no legal effect unless expressly adopted by the Commission as its final order.

STATEMENT OF ISSUES

The issues in this matter are whether Qwest has demonstrated by a preponderance of the evidence that it meets the competitive checklist requirements of 47 U.S.C. § 271( c)(2)(B) in the following areas:

Checklist Item 3: Does Qwest provide nondiscriminatory access to its poles, ducts, conduits, and rights-of-way at just and reasonable rates in accordance with the requirements of § 224?
79. **Joint Provisioning of Facilities.** The CLEC Coalition filed testimony maintaining that Qwest requires CLECs to obtain 911 interconnection trunks from Qwest, whereas it will allow incumbent LECs to jointly provide facilities. Qwest maintains that the Arizona Dial Tone agreement allows CLECs to use facilities provided by the CLEC, Qwest, or a third party carrier. The language provides that "[e]ach party will be responsible for its portion of the build to the Mid-Span meet POI." Nonetheless, Qwest has agreed to amend its SGAT, as requested by the CLEC coalition, to expressly state that "facilities needed for 911 trunks can be provided by the CLEC, Qwest, or a third party carrier. Qwest will jointly provide such facilities on a meet point basis, upon request, as described in Section 7.1.2.3."

80. **Disconnection of AT&T 911 trunks.** In September 2001, AT&T converted its primary 911 route from Centralized Automatic Message Accounting (CAMA) to Signaling System 7 (SS7). Testing at cutover indicated that the conversion was successful. In October AT&T technicians discovered that one of two 911 trunks had been disconnected in the Qwest office. After contacting Qwest, the service was restored within four hours. The next day, the same trunk was disconnected again, and service was again restored within four hours. It is not clear whether any 911 calls from AT&T end users were blocked during the time the trunk was disconnected, or how long the trunk was disconnected. Qwest maintains that these circuits were appropriately marked as high-priority circuits. It contends the error occurred because AT&T made multiple changes in the service orders converting the trunks to SS7 and that Qwest's technician inadvertently failed to check for the most current version of the design work orders, two days in a row. A supervisor has reviewed the procedures for working on 911 circuits with the technician. This appears to have been an isolated incident that Qwest responded to appropriately, and it does not indicate that Qwest treats CLEC 911 circuits differently than its own.

**Checklist Items 7(II) and (III): OS/DA**

81. Section 271(c)(2)(B)(vii)(II) and (III) require Qwest to provide nondiscriminatory access to directory assistance services to allow other carriers' customers to obtain telephone numbers and operator call completion services. Section 251(b)(3) of the Act imposes on each LEC the duty to permit all competing providers to have nondiscriminatory access to operator services, directory assistance, and directory listings, with no unreasonable dialing delays.

82. The FCC has concluded that "nondiscriminatory access" to operator services is the ability of a telephone service customer, regardless of the identity of his or her local service provider, to connect to a local operator by

---

100 Ex. 135 at 10.
101 Ex. 148, LAS-7.2, § 7.1.2.3
102 Ex. 133 at 24.
103 Ex. 143 at 19-20.
104 Ex. 133 at 22.
dialing "0" or "0" plus the desired telephone number. In addition, "nondiscriminatory access to directory assistance and directory listings" means that customers of all telecommunications service providers should be able to access each LEC's directory assistance services and obtain a directory listing on a nondiscriminatory basis, notwithstanding the identity of a requesting customer's local telephone service provider, or the identity of the telephone service provider for a customer whose directory listing is requested.

83. Competing carriers may provide operator services and directory assistance (OS/DA) by either reselling the BOC's services or by using their own personnel and facilities to provide these services. FCC rules require BOCs to permit competitive LECs wishing to resell the BOC's operator services and directory assistance to request the BOC to brand their calls. Competing carriers wishing to provide operator services or directory assistance using their own facilities and personnel must be able to obtain directory listings either by obtaining directory information on a "read only" or "per dip" basis from the BOC's directory assistance database, or by creating their own directory assistance database by obtaining the subscriber listing information in the BOC's database.

84. The FCC originally concluded that BOCs must provide OS/DA on an unbundled basis pursuant to sections 251 and 252. In the UNE Remand Order, the FCC concluded that OS/DA must be provided on an unbundled basis only where the incumbent LEC does not provide the requesting telecommunications carrier with customized routing or a compatible signaling protocol. Checklist item obligations that do not fall within a BOC's obligations to provide unbundled network elements are not subject to the requirements of sections 251 and 252, including the requirement that rates be based on forward-looking economic costs. Checklist item obligations that do not fall within a BOC's UNE obligations, however, still must be provided in accordance with sections 201(b) and 202(a), which require that rates and conditions be just and reasonable, and not unreasonably discriminatory.

85. Qwest provides OS/DA services to 36 reseller CLECs and 11 UNE-P CLECs in Minnesota. It provides directory assistance trunks to seven facilities-based CLECs and operator service trunks to 17-facilities-based CLECs in Minnesota. One CLEC has purchased the directory assistance database.

109 Local Competition Third Report and Order ¶¶ 441, 462 (UNE Remand Order).
110 Id. ¶ 470-73.
111 Tr. 2:82.
86. Reseller CLECs and CLECs that use UNE-P elements or unbundled switching obtain access to Qwest's OS/DA services using the same facilities and the same configurations that Qwest uses to provide OS/DA do its own end users. The OS/DA traffic of these CLECs is automatically routed to Qwest's OS/DA platforms as part of the underlying functionality of Qwest's switching facilities. In addition, OS/DA calls originated by end users of these CLECs are commingled with calls originated by Qwest end user customers and are delivered to Qwest's OS/DA platforms over the same shared trunks that Qwest uses for its end user traffic. CLEC end user customers dial the same numbers as Qwest customers for access to OS/DA--0 or 0 plus for OS, and 411, 1-411, or 555-1212 for DA. The Arizona Dial Tone agreement requires Qwest to permit CLEC end users to dial the same numbers for these services as Qwest end users.

87. CLECs that use their own switching facilities may access Qwest's OS/DA services by establishing dedicated transport from their end office switches to Qwest's OS/DA platforms. The CLEC may self-provision the transport, obtain it from a third party, or purchase unbundled transport from Qwest. These CLECs have the option of allowing their end user customers to dial the same numbers to access OS/DA services that Qwest end users dial, or selecting different numbers by which their end users may access Qwest's OS/DA services. In addition, these CLECs may provide OS/DA services using their own or a third party's platform by routing their OS/DA traffic from their end office switching facilities to their alternate platforms. This configuration would not involve Qwest unless the CLEC chooses to purchase unbundled dedicated transport from Qwest.

88. Qwest maintains that it offers customized routing that would allow reseller CLECs and CLECs that purchase UNE-P combinations or stand-alone unbundled switching to provide access to their own, or to a third party's OS/DA services. Customized routing would involve programming Qwest's switches and the lines of CLEC end users to route OS/DA calls to the platforms of the alternate OS/DA provider over the CLEC's dedicated transport facilities. The Arizona Dial Tone agreement makes customized routing available either by using the same line class codes used by Qwest or by establishing new line class codes. The agreement provides that all custom routing involving the development of new

---

112 Ex. 148 at 8.
113 Id. at 9.
114 Ex. 148, LAS-7.2 at ¶ 10.5.2.8 and 10.7.2.13. During the hearing, Qwest agreed to modify ¶ 10.6.2.5 of the Arizona Dial Tone Agreement, concerning use of the directory assistance database, as requested by WorldCom. See Tr. 2:190; Ex. 50.
115 Ex. 148 at 9.
116 Id. at 10.
117 Ex. 148 at 10.
line class codes, or any other type of custom routing, is to be priced on an "ICB," or individual case basis.\textsuperscript{118}

89. The operator services provided by Qwest to CLEC end users are identical to the services provided to Qwest retail customers. The services include local assistance, intraLATA toll assistance, emergency assistance, busy line verification, and busy line interrupt. The directory services are also identical for both CLEC and Qwest end users. Directory assistance services include the provision of local end user names, addresses, and telephone numbers to requesting callers; where available, the provision of access to Qwest national directory assistance services; and, where available, the completion of local or intraLATA calls to requested numbers.\textsuperscript{119} In addition, Qwest handles OS/DA calls on a first-come, first served basis, without regard to whether calls are originated by CLEC or Qwest end users. Incoming calls are placed in a queue based on the order in which they reach the platforms and are fed automatically to open operators, who have no ability to influence the type of calls that are fed to them from the queue. This handling process applies to calls delivered over shared Qwest trunks and to calls delivered over dedicated CLEC trunks.\textsuperscript{120}

90. Qwest has offered two performance measures as evidence that it provides nondiscriminatory access to OS/DA services. These PIUs, developed in the ROC workshops, are OS-1 and DA-1, "Speed of Answer," which measure the average time required for OS/DA personnel to answer calls. In July 2001, calls to Qwest's operator services were answered in an average of 9.07 seconds and calls to Qwest's directory assistance services were answered in an average of 9.0 seconds.\textsuperscript{121} These performance measures passed the audit by Liberty Consulting Group in September 2001.

91. Finally, Qwest maintains that it offers branding of OS/DA calls for CLECs, although no CLEC has made such a request, and that it offers access to the DA database on either a "per dip" basis (which Qwest calls Directory Assistance Database Service) or on a bulk electronic download basis (called Directory Assistance List Service).\textsuperscript{122} The Arizona Dial Tone Agreement requires the provision of these services in accordance with 47 C.F.R. §51.217(d) and § 51.217(c)(3)(ii).\textsuperscript{123}

92. Qwest provides OS/DA services to facilities-based CLECs at "market-based" rates and to reseller CLECs at the wholesale discounted rates required by the PUC. The wholesale discount rate in Minnesota is 17.66%.\textsuperscript{124}

\textsuperscript{118} Ex. 148, LAS-7.2 at § 9.12.2, LAS-7.2A (Minnesota prices).
\textsuperscript{119} Ex. 148 at 11-12.
\textsuperscript{120} Id. at 13-14.
\textsuperscript{121} Id. at 15, LAS-7.4
\textsuperscript{122} Id. at 16-22.
\textsuperscript{123} Ex. 148, LAS-7.2 at §§ 10.5, 10.7.
\textsuperscript{124} Ex. 148 at 23, LAS-7.2A.
93. The Department and OAG/RUD maintain that Qwest fails to prove compliance with Checklist Item 7(l) because the performance measures offered are based on pooled data that do not differentiate between retail vs. wholesale performance and accordingly do not prove nondiscriminatory provisioning of service.

94. The ROC accepted that these performance measures provide “parity by design” because Qwest commingles its own OS/DA calls with those of any CLECs using its platforms. Although these performance indicators do not prove beyond doubt that Qwest is providing nondiscriminatory access, they do provide evidence that Qwest does not treat competitors differently. The process used by Qwest provides sufficient “parity by design” to conclude that disaggregation of the data is not necessary in order for Qwest to make a prima facie showing of compliance with this checklist item.

95. Because Qwest has made a prima facie showing of compliance, it is up to the other parties to show that it does not comply. They have advanced the following arguments.

96. **Customized Routing.** The Department, Worldcom, and the OAG/RUD maintain that Qwest does not provide customized routing that would enable a CLEC to provision directory assistance or operator services and that therefore those services must remain available as unbundled network elements and be priced at TELRIC rates, as opposed to market rates. Qwest maintains that it provides custom routing and that its market-based rates are reasonable. Qwest and the Department stipulated, with the concurrence of the other parties, that the issue of what pricing standard would apply to these services would be considered in this docket. If the ALJ rules that costs are necessary to evaluate or establish prices for the services, those costs will be determined in the pricing docket (No. 1375).^{125}

97. Customized routing permits requesting carriers to designate the particular outgoing trunks associated with unbundled switching provided by the incumbent, which will carry certain classes of traffic originating from the requesting provider's customers. This feature would allow the requesting carrier to specify that OS/DA traffic from its customers be routed over designated trunks which terminate at the requesting carrier's OS/DA platform or a third party's OS/DA platform.^{126} To the extent that incumbent LECs do not accommodate technologies used for customized routing, such as Feature Group D signaling, they must offer OS/DA as an unbundled network element.^{127}

98. Qwest acknowledges that it is not currently providing customized routing by any method to any CLEC in Minnesota, nor is it providing customized

---

^{125} Eleventh Prehearing Order ¶¶ 1-3 (Feb. 21, 2002).
^{126} UNE Remand Order ¶441 n. 867.
^{127} See UNE Remand Order ¶ 463.
routing to any CLEC in its 14-state territory. As noted above, the agreement with Arizona Dialtone reflects what Qwest calls "standard" custom routing through development of new line class codes to route OS/DA calls to dedicated trunks that the requesting provider must order from Qwest, and the agreement prices the service on an "ICB" basis. Qwest does not commit to providing the service in any standard interval, maintaining that all requests for customized routing should be treated on an ICB basis. Qwest has developed what it calls a "standard" customized routing nonrecurring charge that it has filed in the UNE Pricing Docket, No. 1375. The project plan for "standard" customized routing calls for establishment of a due date within 20 days of the effective date of service request, and for implementation of one new line class code at one wire center in 60 days.

99. Worldcom maintains that the most efficient way to provide OS/DA from its own platform is to route OS/DA traffic to its existing Feature Group D trunks, as opposed to local interconnection trunks that it would have to purchase. In Colorado, Worldcom negotiated an amendment to its interconnection agreement with Qwest that requires Qwest to provide customized routing over Feature Group D trunks. During the hearing, Qwest's witness made clear that Qwest would not provide customized routing to Feature Group D trunks unless an interconnection agreement required it. Qwest would not take a position on whether it was technically feasible or not to route calls in this manner "because we have never received from WorldCom a service inquiry, which is the method for ordering that service."

100. The FCC addressed customized routing in the BellSouth Louisiana II case. There, BellSouth proffered two methods of customized routing: AIN and line class codes. Because BellSouth did not offer customized routing through AIN at the time of its application, the FCC concluded BellSouth could not rely on it to show compliance with requirement of customized routing. The FCC concluded that BellSouth's use of line class codes would be an acceptable interim method of providing customized routing, but that BellSouth did not demonstrate that it could provide it in a nondiscriminatory manner because of the inability of CLECs to order it efficiently and without manual processing by BellSouth. The FCC specifically addressed the argument that BellSouth would not provide customized routing using Feature Group D signaling. Because MCI could not demonstrate that it had actually requested this method of customized

136 Id. at ¶¶ 222-25.
routing, the FCC found the record inconclusive. Nonetheless, the FCC concluded that:

... MCI may have otherwise raised a legitimate concern. If a competing carrier requests Feature Group D signaling and it is technically feasible for the incumbent LEC to offer it, the incumbent LEC's failure to provide it would constitute a violation of section 251(c)(3) of the Act. Our rules require incumbent LECs, including BOCs, to make network modifications to the extent necessary to accommodate interconnection or access to network elements.°

101. The Michigan Public Service Commission has rejected an argument similar to the one advanced by Qwest in this proceeding. There, it found that:

Ameritech Michigan has interpreted the customized routing conditions of the UNE Remand Order as requiring less of it than the FCC intended. The justification that the FCC provided for changing its approach was that competitive OS/DA had become widely available on a national basis and could be readily accessed if the ILEC provided appropriate customized routing arrangements. However, the FCC did not suggest that an ILEC could arbitrarily implement any form of customized routing it desired, without regard to whether that arrangement provided meaningful access to competitive OS/DA alternatives. The FCC emphasized instead that "customized routing is necessary to access alternative sources of OS/DA for competitors not deploying their own switches," and that "lack of a customized routing solution that enables competitors to route traffic to alternative OS/DA providers would therefore effectively preclude competitive LECs from using such alternative providers."

This concern is also apparent in the FCC's discussion of the substantial cost of reconciling WorldCom's Feature Group D signaling with other systems used by ILECs, a difficulty that WorldCom raises in this case. SBC had taken the position in the UNE Remand case that customized routing of Feature Group D was not technically feasible for all end-office switches. The FCC concluded that it would "require incumbent LECs, to the extent they have not accommodated technologies used for customized routing, to offer OS/DA as an unbundled network element." The significance of the point, in this Commission's view, is that the FCC did not regard technical issues as problems for the CLECs alone to address entirely at their own expense. Instead, the FCC directed

137 Id. at ¶ 226.
both parties to attempt to devise technical solutions and, failing
that, it required the ILEC to make OS/DA available as a UNE:

The Commission finds that Ameritech Michigan must continue to
offer OS/DA as a UNE at TSLRIC-based rates. The obligation to
provide unbundled OS/DA will continue in effect until Ameritech
Michigan provides reasonable accommodations for the problems
presented by dedicated end-office trunking and other technological
issues that inflate the CLECs' cost of obtaining access to
competitive OS/DA services. When Ameritech Michigan believes
that it meets the requirements relating to providing access to
competitive OS/DA services, it may file an application for
authorization to remove OS/DA from its list of UNEs. However, it
may not remove OS/DA from UNE status without prior Commission_
authorization. 138

102. Although Qwest made a prima facie case showing that it provides
OS/DA service on a nondiscriminatory basis, its opponents have demonstrated
that Qwest fails to provide customized routing as contemplated by the FCC.
First, there is no real evidence that a competitive wholesale market for OS/DA
exists in Minnesota, because Qwest is not providing customized routing to any
CLEC in Minnesota. Qwest's "offer" to provide this service appears to be no
more than a paper promise, as opposed to a demonstration of present
compliance.

103. Second, Qwest's opponents have demonstrated that Qwest has not
accommodated technologies used for customized routing as required by the
FCC, and therefore OS/DA must be offered as unbundled network elements. 139
Even without evidence of a specific request for customized routing, the record is
clear that Qwest is not capable of furnishing it in quantities that competitors may
reasonably demand and at an acceptable level of quality. For customized routing
through line class codes, which the FCC has indicated would be acceptable on
an interim basis, Qwest has no standard pricing and no standard service interval.
No CLEC is likely to order the service on this basis, particularly when Qwest will
not even engage in testing without "clear evidence" that the CLEC is going to
order the service. 140 Although it has committed to provide routing over Feature
Group D trunks in Colorado, it will not commit to providing it in Minnesota, and it
will not even take a position as to whether it is technically feasible to do so unless
a CLEC first orders it, again without knowing the cost or how long it would take.
Qwest's position puts the cart before the horse, and is self-serving and anti-
competitive. No CLEC can be expected to order a service without some
assurance and likelihood that it will work. There may be some method of

138 In the Matter of the Application of Ameritech Michigan for Approval of a Shared Transport Cost
Study and Resolution, Case No. U-12622, Opinion and Order at 10-11 (March 19, 2001)
(citations omitted).
139 See UNE Remand Order ¶ 463.
140 Tr. 2:203.
ensuring that the CLEC participates in the cost of testing new services, even if it does not order the service, but Qwest’s position is too extreme.

104. Because Qwest does not provide customized routing, it cannot charge market-based rates for OS/DA services. Because Qwest charges market-based rates in Minnesota for OS/DA services, it is not in compliance with checklist items 7(II) and (III). This deficiency can be remedied by pricing OS/DA as unbundled network elements. Until Qwest begins providing more reasonable accommodations to the technological problems presented by customized routing, OS/DA should remain unbundled network elements and should be priced as such in the UNE pricing docket.

Checklist Item 8: White Pages Directory Listings

105. Section 271(c)(2)(B)(viii) of the 1996 Act requires Qwest to provide white pages directory listings for customers of other carriers’ telephone exchange service. Section 251(b)(3) obligates all LECs to permit competitive providers of telephone exchange service and telephone toll service to have nondiscriminatory access to directory listings.\(^{141}\)

106. A BOC satisfies the requirements of checklist item 8 by demonstrating that it (1) provided nondiscriminatory appearance and integration of white page directory listings to competitive LECs’ customers; and (2) provided white page listings for competitors’ customers with the same accuracy and reliability that it provides its own customers.\(^{142}\) The term “white pages” refers to the local alphabetical directory that includes the residential and business listings of the customers of the local exchange provider. The term “directory listing” includes, at a minimum, the subscriber’s name, address, telephone number, or any combination thereof.\(^{143}\)

107. Qwest maintains that it provides nondiscriminatory access to white pages listings as demonstrated by its agreement with Arizona Dial Tone. That agreement, at section 10.4.2.24, states that any arrangement for the publication of white pages directory listings with an affiliate, including QwestDex, Qwest’s official directory publisher, requires the affiliate to publish a CLEC’s directory listings such that the CLEC’s directory listings are nondiscriminatory in appearance and integration, and have the same accuracy and reliability as Qwest’s end user listings.\(^{144}\) White pages directory listings for Qwest and CLEC end users appear in the same font, size, and typeface, with no separate classification or distinguishing characteristics.\(^{145}\) Listings for Qwest and CLEC

Continued Costing and Pricing of Unbundled Network Elements, Transport, and Termination

FORTY-FIRST SUPPLEMENTAL ORDER; PART D INITIAL ORDER; ESTABLISHING NONRECURRING AND RECURRING RATES FOR UNES

I. SYNOPSIS

This Initial Order proposes resolutions for issues relating to the nonrecurring and recurring costing and pricing of numerous unbundled network elements for Qwest and Verizon.

IV. FINDINGS OF FACT .................................................................................................................................. 90
V. CONCLUSIONS OF LAW .......................................................................................................................... 90
VI. ORDER ...................................................................................................................................................... 90
Preset, and Conference Calling - Station Dial. Qwest proposes nonrecurring charges for the first port and each additional port. *Qwest Brief, at page 32.* Staff believes that Qwest’s proposed rates for these network elements are appropriate. *Staff Brief, at page 10.*

**Decision:** Qwest fails to provide the necessary support for its proposal. Qwest must reduce the work time estimates for this element by 30 percent for the reasons stated above in paragraphs 62 through 65.

**s. Digital Trunk Port**

In Part D, Qwest proposes rates for the following types of digital trunk ports: DS1 Local Message Trunk Port, Unbundled DS1 PRI ISDN Trunk Port Supporting Direct Inward Dial/Direct Outward Dial/Private Branch Exchange ("DID/DOD/PBX"), and DS3 and OCN Trunk Ports. Qwest states that these elements may be ordered via the Special Request Process. Qwest’s proposal calls for a nonrecurring charge for the digital trunk port, as well as nonrecurring charges for the establishment of the first and each additional message trunk group member associated with the digital trunk port. *Qwest Brief, at page 32-33.* Staff believes that Qwest’s proposed rates for these network elements are appropriate. *Staff Brief, at page 10.*

**Decision:** Qwest fails to provide the necessary support for its proposal. Qwest must reduce the work time estimates for this element by 30 percent for the reasons stated above in paragraphs 62 through 65.

**t. DS0 Analog Trunk Port**

Qwest states that its proposed nonrecurring charges are supported by Exhibit 2023. *Qwest Brief, at page 33.* Staff believes that Qwest’s proposed rates for these network elements are appropriate. *Staff Brief, at page 10.*

**Decision:** Qwest fails to provide the necessary support for its proposal. Qwest must reduce the work time estimates for this element by 30 percent for the reasons stated above in paragraphs 62 through 65.

**u. Customized Routing**

**Discussion:** Qwest states that customized routing is a software function of a switch that enables CLECs to direct particular classes of calls to specific outgoing trunks. Qwest claims that while customized routing applications are unique to each CLEC Qwest has developed a "standardized" offering for which it proposes to assess nonrecurring charges based on the development and installation of customized line class codes. For Operator Services ("OS") or Directory Assistance ("DA") routing only, Qwest proposes a nonrecurring charge for the development of a customized line
class code, and a second nonrecurring charge per installation per switch. Qwest states that all other forms of customized routing are designed to meet the specific requirements of an individual CLEC and, therefore, will be charged on an individual case basis ("ICB"). *Qwest Brief at page 33.*

Qwest maintains that the FCC determined in the UNE Remand Order that OS and DA do not have to be provided on an unbundled basis when an ILEC offers customized routing. Qwest believes that its customized routing proposal meets the FCC’s requirement and, therefore, Qwest is no longer required to provide OS and DA as UNEs. *Qwest Brief, at page 34.*

WorldCom disputes whether Qwest’s customized routing proposal meets the FCC’s requirement. WorldCom contends that it submitted a completed customized routing form to Qwest, including attachments demonstrating how its request to route OS/DA calls to existing Feature Group D ("FGD") trunks can be implemented, but Qwest refuses to comply. According to WorldCom, Qwest acknowledges that WorldCom’s request is technically feasible but that Qwest has made a business decision not to translate a "411" call to a toll call and provide common transport. *WorldCom Brief, at page 43-46.*

WorldCom also argues that Qwest’s ICB pricing proposal for customized routing is so vague that it is impossible to determine if the proposed rates are reasonable and nondiscriminatory. WorldCom recommends that Qwest be required to submit a verifiable cost study based on WorldCom’s FGD customized routing needs so that the Commission and the parties can evaluate the proposal based on concrete information. *WorldCom Brief, at page 53.*

Commission Staff notes that Qwest did not provide cost support for its customized routing rates. *Staff Brief, at page 11.* Staff believes that if WorldCom wants customized routing using FGD trunks it should be required to seek it through the Bona Fide Request ("BFR") procedure. *Staff Brief, at page 11.* Citing the FCC’s UNE Remand Order, *Commission Staff maintains that the issue to be addressed is whether Qwest has “accommodated” WorldCom’s request for FGD customized routing. However, Staff contends that regardless of how this issue is resolved, Qwest should be required to present cost studies for OS/DA to enable the Commission to determine if Qwest’s proposed price exceeds its costs so that cross subsidization is not a concern. *Staff Reply Brief, at page 8.*

---

113 TR at 4756-57.
114 TR at 4184.
115 ".... Thus, we require incumbent LECs, to the extent they have not accommodated technologies used for customized routing, to offer OS/DA as an unbundled network element." (Emphasis added). UNE Remand Order, at para. 463.
WorldCom claims that it has already completed the steps that comprise the BFR process without success. Thus, requiring WorldCom to start over through another “official” BFR process would simply require WorldCom to repeat steps already taken, adding expense and delay. *WorldCom Reply Brief, at pages 28-29.*

Qwest claims that WorldCom’s assertion that Qwest has violated the parties’ interconnection agreement by refusing to implement FGD customized routing is disingenuous because the record shows that WorldCom requested customized routing only weeks before the hearings in this docket. According to Qwest, the parties were still in the process of conducting implementation meetings when hearings were conducted. Furthermore, Qwest maintains that under the terms of the interconnection agreement WorldCom is permitted to designate only “unique” trunks for customized routing. Qwest interprets this language such that it is only required to route traffic to WorldCom’s FGD trunks that are not shared with other carriers. Qwest claims that it has agreed to route WorldCom’s traffic to its “unique” FGD trunks, as interpreted. *Qwest Reply Brief, at pages 11-12.*

WorldCom challenges Qwest’s interpretation of the parties’ interconnection agreement. WorldCom claims that Qwest’s interpretation is unreasonable and ignores the fact that the interconnection agreement explicitly states that WorldCom may route calls to existing FGD trunks. Moreover, WorldCom argues that it would be uneconomical and wasteful for the Commission to interpret the agreement as advocated by Qwest, as such a ruling would result in the underutilization of trunk groups and significant unnecessary expense to WorldCom. *WorldCom Reply Brief, at pages 23-24.*

Qwest maintains that WorldCom’s proposed solution for customized routing was shown at the hearings to require significant additional investment per switch, and ultimately would only work on Lucent switches. Qwest states that less than half of its central offices in Washington contain the Lucent 5E switch that WorldCom’s solution addresses. Moreover, Qwest maintains that implementation of FGD customized routing faces additional obstacles that would need to be addressed by Qwest and the requesting CLEC because FGD trunks uses industry standard Equal Access SS7 signaling protocols while Qwest’s customized routing, on the other hand, routes CLEC OS/DA calls using industry standard traditional signaling. Qwest claims that these differences in signaling create inconsistencies when gathering data

---

116 WorldCom represents that 1) it submitted its written request and technical specifications on Qwest-supplied forms and pursuant to Qwest’s directions, 2) technical experts have met on several occasions to discuss the issues, 3) letters have been exchanged between company executives consistent with the agreed upon escalation process, 4) the escalation process is complete, and 5) Qwest has refused to provide WorldCom with customized routing over its existing Feature Group D trunks. *WorldCom Reply Brief, at pages 28-29.*

117 Exhibit No. 2194 and TR at 4741-44.
for accurate ordering, provisioning, billing, and maintenance of these facilities. Qwest also notes that FGD trunks generally terminate at an access tandem switch, and not at the end office. Therefore, WorldCom would have to extend its FGD trunks beyond the access tandem to the end office at substantial expense. Finally, Qwest states that it remains willing to discuss these and other issues with WorldCom in order to attempt to implement WorldCom’s request for customized routing across FGD trunks. *Qwest Brief, at pages 35-36.*

WorldCom argues that the “significant investment” referred to by Qwest relates to right to use fees that Qwest claims it will need to pay vendors for the software to implement FGD customized routing. WorldCom contends that such fees are normally recovered as part of Qwest’s local switching network element rates, and thus, WorldCom should pay Qwest for any right-to-use fee investment necessary for customized routing in the same way that it pays Qwest for all other right-to-use fee investments - through the recurring local switching rate. WorldCom claims that the FCC specifically addressed this issue and held that right-to-use fees should be included in the UNE rate, and should not be separately recovered. *WorldCom Reply Brief, at pages 27-28.*

WorldCom argues that there is no evidence to support Qwest’s claim that there are signaling obstacles to overcome before FGD customized routing can be provisioned. On the contrary, WorldCom argues that the record indicates that its request is technically feasible and that Qwest refuses to provide FGD customized routing because it has made a business decision to deny WorldCom’s request. WorldCom maintains that its proposal will not require it to extend FGD trunks to the end office as suggested by Qwest. According to WorldCom, it is simply requesting that Qwest route WorldCom’s local customers’ OS/DA traffic in the same way that Qwest currently routes WorldCom’s long distance customers’ OS/DA traffic. WorldCom argues that its customized routing proposal takes its UNE-P customers’ local OS/DA calls and makes them “look like” long distance calls that would naturally flow to WorldCom’s existing network. WorldCom also argues that Qwest is disingenuous when it implies that the parties are continuing to work together to resolve these issues. According to WorldCom the parties are at an impasse. *WorldCom Reply Brief, at pages 25-26.*

---

118 Qwest argues that its customized routing functions occur at the end office and, at present, these calls cannot be “tandemed.” That is, Qwest is unaware of any signaling technology that would allow for the routing of these types of calls to any type of tandem switch. *Qwest Brief, at page 36.*

119 *In the Matter of Petition of MCI for Declaratory Ruling that New Entrants Need Not Obtain Separate License or Right to Use Agreements Before Purchasing Unbundled Elements, CC Docket No. 96-98, FCC 00-139 (Rel. April 27, 2000), at para 9-11.*
Qwest argues that WorldCom's request is tantamount to 411 presubscription.\textsuperscript{120} Qwest states that while the FCC is currently considering this issue on its own the record in this proceeding lacks sufficient evidence for the Commission to reach an informed decision regarding 411 presubscription or even the merit of WorldCom's arguments. \textit{Qwest Reply Brief, at pages 11-12.}

WorldCom disagrees with Qwest's assertion that it is actually asking for 411 presubscription. WorldCom claims that 411 presubscription refers to the ability of end-user customers to choose their OS/DA carrier, regardless of which local carrier the customers choose. However, WorldCom claims it merely wants to be able to designate where its end users' OS/DA traffic is routed so that it can self-provision OS/DA services. \textit{WorldCom Reply Brief, at page 23.}

\textbf{Decision:} This generic cost proceeding is not an appropriate forum to resolve WorldCom's claim that Qwest's refusal to implement FGD customized routing violates the parties' interconnection agreement. If WorldCom believes that Qwest has breached the parties' contractual agreement, then WorldCom must initiate other more appropriate process to address its grievances.\textsuperscript{121}

WorldCom also claims that Qwest's refusal to implement FGD customized routing violates the Telecom Act and FCC orders. In support of this claim WorldCom cites paragraph 463 of the UNE Remand Order, which states:

\begin{quote}
... SBC responds that the customized routing of Feature Group D is not technically feasible in all end-office switches. Bell South, however, offers a technical solution to MCI WorldCom's concern in some of its offices and states its willingness to deploy these solutions throughout its network. In instances where the requesting carrier obtains the unbundled switching element from the incumbent, the lack of customized routing effectively precludes requesting carriers from using alternative OS/DA providers and, consequently, would materially diminish the requesting carrier's ability to provide the services it seeks to offer. \textit{Thus, we require incumbent LECs, to the extent they have not accommodated technologies used for customized routing, to offer OS/DA as an unbundled network element.} (Emphasis added).
\end{quote}

WorldCom notes that other state commissions have reached similar conclusions and ordered the ILECs to provide WorldCom OS and DA as UNEs until its FGD solution

\textsuperscript{120}"Presubscription" refers to the process by which a customer preselects a carrier, to which all of a particular category or categories of calls on the customer's line will be routed automatically.

\textsuperscript{121} For instance, WorldCom can file a petition for enforcement of interconnection agreement under WAC 480-09-530 of the Commission's rules.
was implemented. For example, the California Public Utility Commission ("CPUC") concluded that:

We agree with the FAR's conclusion that paragraph 463 refers to the same type of customized routing that MCI is requesting in this arbitration. It is significant that while the FCC acknowledges that there may be technical difficulties in accomplishing the customized routing requested, it does not indicate that technical infeasibility would excuse the ILEC from the requirement to offer OS and DA as UNEs.... Therefore, there was no need for the arbitrator to determine whether particular functions are technically feasible in particular switch types.122

The CPUC's reasoning of FCC's UNE Remand Order is sound and applies to the very facts before the Commission in this proceeding. Paragraph 463 of the FCC's UNE Remand Order provides that the existence of technical uncertainty does not release an ILEC from its responsibility to provide OS and DA at cost based rates until such time as it has accommodated the CLECs customized routing request.123 Qwest must submit a cost study, consistent with this decision, for OS and DA so that these network elements are available at cost based rates to CLEC's whose customized routing needs have not been accommodated by Qwest.

The FCC's Second Louisiana Order124 also supports this decision. Paragraph 226 of that Order states:

MCI raises a separate challenge to BellSouth's customized routing offering. MCI claims that BellSouth will not "translate" its customers' local operator services and directory assistance calls to Feature Group D signaling. As a result, MCI cannot offer its own operator services and directory assistance services to customers it serves using unbundled local switching. MCI, however, fails to demonstrate that it has requested Feature Group D signaling, and BellSouth claims that it has never received such a request. Thus, the record is inconclusive as to this objection. We believe, however, that MCI may have otherwise raised a legitimate concern. If a competing carrier requests Feature Group D signaling and it is technically feasible for the incumbent LEC to offer it, the incumbent LEC's failure to

122 CA-PUC Decision 01-09-054 (Rel. September 20, 2001), at page 12.
123 The record in this proceeding also indicates that WorldCom's proposal is technically feasible, but has been rejected by Qwest for business considerations TR at 4752-57.
124 In the Matter of Application of BellSouth Corporation, BellSouth Telecommunications, Inc., and BellSouth Long Distance, Inc. for Provision of In-Region, InterLATA Services in Louisiana, CC Docket No. 98-121 (Rel. October 13, 1998) ("Second Louisiana Order").
provide it would constitute a violation of section 251(c)(3) of the Act. Our rules require incumbent LECs, including BOCs, to make network modifications to the extent necessary to accommodate interconnection or access to network elements. (Emphasis added).

Qwest recommends that the Commission reject WorldCom's proposal because it was shown at the hearings to require significant additional investment per switch, and ultimately would only work on Lucent switches. Qwest suggests that if it does accommodate WorldCom's request that WorldCom, the cost causer, should be solely responsible to pay for necessary software upgrades. However, I believe that the Commission must reject Qwest's argument because, as cited by WorldCom, it is contrary to the FCC's opinion on this matter. While contemplating the issue raised by Qwest the FCC stated:

We conclude that the "nondiscriminatory access" obligation in section 251(c)(3) requires incumbent LECs to use their best efforts to provide all features and functionalities of each unbundled network element they provide, including any associated intellectual property rights that are necessary for the requesting carrier to use the network element in the same manner as the incumbent LEC. In particular, incumbent LECs must exercise their best efforts to obtain co-extensive rights for competing carriers purchasing unbundled network elements. We further find that the nondiscriminatory access obligation requires incumbent LECs to allocate any costs associated with acquiring the necessary intellectual property rights among all requesting carriers, including themselves....125 (Emphasis added, footnotes omitted).

The software upgrade identified by Qwest, and the attendant right to use fees, fall within the scope of the FCC's discussion. Therefore, at such time as Qwest implements the FGD customized routing requested by WorldCom, Qwest must seek recovery of these costs in the nondiscriminatory manner described by the FCC above. Qwest may subsequently request that the Commission address anew whether the company's proposal to offer OS and DA at market based rates should be approved.

Finally, Qwest proposes to assess nonrecurring charges based on the development and installation of customized line class codes. WorldCom represents that where customized routing is provided over FGD trunks, WorldCom further implements

125 In the Matter of Petition of MCI for Declaratory Ruling that New Entrants Need Not Obtain Separate License or Right to Use Agreements Before Purchasing Unbundled Elements. CC Docket No. 96-98, FCC 00-139 (rel. April 27, 2000) at para 9. See generally discussion at paras. 9-11.
OS/DA via line class codes in its own network. WorldCom Brief, at page 45. Thus, it appears that WorldCom would not be subject to Qwest’s proposed nonrecurring line class code charges where customized routing is accomplished via FGD trunks, and no party otherwise challenges Qwest’s proposed rates to develop and install line class codes. Qwest’s proposal is approved, subject to the 30% work time adjustment.

v. Common Channel Signaling / SS7

Discussion: Common Channel Signaling/Signaling System 7 (“SS7”) provides multiple pieces of signaling information via the SS7 network. This signaling information includes, but is not limited to, specific information regarding calls made on associated Feature Group D trunks and/or LIS trunks, Line Information Database (“LIDB”) data, Local Number Portability, Custom Local Area Signaling Services (“CLASS”), 8XX set up information, call set up information and transient messages. Qwest proposes nonrecurring charges for CCS/SS7 that include: 1) Common Channel Signaling Access Service (“CCSAC”) Options Activation charge for basic translations; and 2) CCSAC Options Activation charge for database translation. Qwest Brief, at page 37.

Advanced Intelligent Network (“AIN”) is a call-related database platform that enables telecommunications companies to provide customized incoming and outgoing call management services. Qwest offers AIN Customized Services, AIN Platform Access and AIN Query Processing. Qwest proposes that the nonrecurring rates for AIN Customized Services and AIN Platform Access will be determined on an individual case basis because the feature functionality of the service is defined by the CLEC. Qwest Brief, at page 37.

WorldCom argues that it is uncertain what Qwest is proposing with regard to SS7 charges. WorldCom states that Qwest’s testimony on these rate elements is vague and that neither a review of Qwest’s SGAT nor Qwest’s discovery responses allow WorldCom to determine with particularity the circumstances under which Qwest proposes to assess its rates on CLECs. WorldCom believes that Qwest failed to meet its burden of proof and recommends that the proposed SS7 charges be rejected. WorldCom Brief, at page 53.

Decision: Qwest fails to provide the necessary support for its proposal. Qwest must reduce the work time estimates for this element by 30 percent for the reasons stated above in paragraphs 62 through 65.

MEMORANDUM OPINION AND ORDER

</table>
In this order, we issue the first of two decisions that resolve questions presented by three petitions for arbitration of the terms and conditions of interconnection agreements with Verizon Virginia, Inc. (Verizon). Following the enactment of the Telecommunications Act of 1996 (1996 Act),1 the Commission adopted various rules to implement the legislatively mandated, market-opening measures that Congress put in place.2 Under the 1996 Act’s design, it has been largely the job of the state commissions to interpret and apply those rules through arbitration proceedings. In this proceeding, the Wireline Competition Bureau, acting through authority expressly delegated from the Commission, stands in the stead of the Virginia State Corporation Commission. We expect that this order, and the second order to follow, will provide a workable framework to guide the commercial relationships between the interconnecting carriers before us in Virginia.

The three requesting carriers in this proceeding, AT&T Communications of Virginia, Inc. (AT&T), WorldCom, Inc. (WorldCom) and Cox Virginia Telcom, Inc. (Cox) (collectively “petitioners”), have presented a wide range of issues for decision. They include issues involving network architecture, the availability of unbundled network elements (UNEs), and inter-carrier compensation, as well as issues regarding the more general terms and conditions that will govern the interconnecting carriers’ rights and responsibilities. As we discuss more fully below, after the filing of the initial pleadings in this matter, the parties conducted extensive

---

applicable law in the event the Commission's collocation rules are modified without resorting to a drawn-out contract amendment process.

531. We reject WorldCom's proposal and direct the parties to include Verizon's proposed Collocation Attachment, section 1. We will not create a "safe harbor" list of equipment that Verizon is required to permit WorldCom to collocate. The Commission declined to establish such a list and, as we have stated earlier, we will not go beyond Commission precedent in resolving the parties' disputes. Moreover, we note that there is no disagreement between the parties about what is the applicable law or how it applies to the specific equipment WorldCom seeks to collocate. Also, we find that Verizon's proposal contractually binds it to comply with "applicable law." Unless and until the incumbents' obligations pursuant to the Collocation Remand Order are modified by the Commission or a court decision, Verizon is required to comply with those rules as they are the "applicable law" on the subject of collocation of advanced services equipment. WorldCom can avail itself of the agreement's dispute resolution process if it believes that Verizon is not adhering to those rules.

18. Issues IV-80/IV-81 (Customized Routing for Directory Assistance and Operator Services)

a. Introduction

532. Verizon and WorldCom agree regarding how Verizon should route WorldCom's operator services and directory assistance traffic, but they disagree regarding certain related issues that, WorldCom believes, will affect its ability to obtain nondiscriminatory access to operator services and directory assistance in accordance with the Commission's rules. Specifically, these parties agree that Verizon should provide customized routing for that traffic, that this routing should be to WorldCom's Feature Group D trunks, and that Verizon's advanced

---

1762 Id. at 6-7.

1763 See Verizon's November Proposed Agreement to WorldCom, Part C, Collocation Attach., § 1. We note that the substance of this proposal is identical to that contained in the November DPL, which Verizon labels its proposed section 13.0 to the Collocation Attachment. We further note that section 13 of the AT&T-Verizon Interconnection Agreement relates to collocation. The WorldCom proposal that we reject is found in section 4.2.3.1 of its Part C, Attachment III.

1764 We note that WorldCom's proposal would expressly permit it to collocate DSLAMs and splitters in Verizon's premises. While we anticipate no dispute with regard to the collocation of this equipment, for reasons described below, we nonetheless determine that that Verizon's language is preferable.

1765 See Collocation Remand Order, 16 FCC Rcd at 15459-60, para. 44.

1766 We note that the Commission's order and rules were recently upheld by the D.C. Circuit in Verizon.
intelligent network (AIN) should provide this routing.\textsuperscript{1767} They disagree, however, regarding whether the interconnection agreement should address this area and, if so, whether the agreement should contain contingency provisions in the event AIN routing does not work.\textsuperscript{1768} We address these areas of disagreement in turn. For the reasons set forth below, we rule for WorldCom on these issues.

533. We note that Feature Group D is an access arrangement that allows end users reach their presubscribed interexchange carrier (IXC) through 1+ dialing. Feature Group D trunks, in turn, connect an incumbent LEC's and an IXC's offices with each other.\textsuperscript{1769} Customized routing permits a requesting carrier to specify that the incumbent LEC route, over designated trunks that terminate in the requesting carrier's operator services and directory assistance platform, operator services and directory assistance calls that the requesting carrier's customers originate.\textsuperscript{1770} AIN refers to a telecommunications network in which call processing, call routing, and network management are provided by means of centralized databases, rather than from comparable databases located at every switching system.\textsuperscript{1771}

b. Routing Using AIN Architecture

(i) Positions of the Parties

534. WorldCom considers it critical that the interconnection agreement include terms setting forth Verizon's obligation to provide customized routing of WorldCom's operator services and directory assistance traffic. WorldCom states that otherwise it would have no means to enforce Verizon's commitment to provide that routing.\textsuperscript{1772} Verizon maintains that the interconnection agreement need only require that, in the event either party requests nondiscriminatory access to the other party's directory assistance service, intraLATA operator call completion services, or directory assistance database, the parties shall enter into a mutually acceptable agreement for such access.\textsuperscript{1773} Verizon maintains that this approach would address

\textsuperscript{1767} E.g., Verizon UNE Brief at 108; WorldCom Brief at 149.

\textsuperscript{1768} Compare, e.g., Verizon UNE Brief at 108-11 with, e.g., WorldCom Brief at 149-50.

\textsuperscript{1770} See UNE Remand Order, 15 FCC Rcd at 3891, n.867.

\textsuperscript{1772} WorldCom Brief at 149; WorldCom Reply at 132.

\textsuperscript{1773} Verizon UNE Brief at 111.
Verizon's provision of operator services and directory assistance satisfactorily, in full compliance with current law.\textsuperscript{1774}

(ii) Discussion

535. We agree with WorldCom that its interconnection agreement with Verizon should reflect Verizon's agreement to use its AIN architecture to provide customized routing for operator services and directory assistance calls to WorldCom's Feature Group D trunks. We thus accept WorldCom's contract language on this issue, which memorializes Verizon's commitment to deploy its AIN capability to provide that routing.\textsuperscript{1775} As an initial matter, we conclude that a competitive LEC's request for customized routing for operator services and directory assistance traffic is an appropriate subject matter for an interconnection agreement pursuant to sections 251 and 252. Specifically, section 251(c)(1) imposes upon Verizon "[t]he duty to negotiate in good faith in accordance with section 252 the particular terms and conditions of agreements to fulfill," among other statutory duties, Verizon's duties under section 251(c)(3).\textsuperscript{1776} The Commission's rules implementing section 251(c)(3) require that Verizon must provide nondiscriminatory access to operator services and directory assistance as a UNE except where it provides requesting carriers with customized routing or a compatible signaling protocol for their customers' operator services and directory assistance traffic.\textsuperscript{1777} Because Verizon proposes to comply with this rule by providing WorldCom with customized routing, we conclude that WorldCom can invoke the section 252 arbitration process to resolve its dispute with Verizon over the terms and conditions of this customized routing arrangement.\textsuperscript{1778}

536. We find WorldCom's proposal that the interconnection agreement memorialize the agreement the parties have reached regarding customized routing to be consistent with section 251 and the Commission's rules.\textsuperscript{1779} Instead of having the interconnection agreement reflect this substantive agreement, Verizon proposes that the interconnection agreement require

\textsuperscript{1774} Id.

\textsuperscript{1775} See WorldCom's November Proposed Agreement to Verizon, Part C, Attach. VIII, §§ 6.1.3 (first sentence to the extent it discusses routing using AIN capability), 6.1.4 (first sentence to the extent it discusses routing using AIN capability).

\textsuperscript{1776} 47 U.S.C. § 251(c)(1). We note that section 251(c)(1) also provides that the "requesting carrier has the duty to negotiate in good faith the terms and conditions of such agreements." 47 U.S.C. § 251(c)(1).

\textsuperscript{1777} 47 C.F.R. § 51.319(f) (requiring that an incumbent LEC must provide nondiscriminatory access to operator services and directory assistance as a UNE "only where the incumbent LEC does not provide the requesting telecommunications carrier with customized routing or a compatible signaling protocol" for operator services and directory assistance traffic).

\textsuperscript{1778} See 47 C.F.R. § 51.807(6)(1) (requiring that we resolve any open issues in this proceeding in accordance with "the requirements of section 251, including the rules prescribed by the Commission pursuant to that section").

\textsuperscript{1779} See 47 U.S.C. § 252(c)(1).
that WorldCom "arrange, at its own expense, the trunking and other facilities required to transport traffic to and from the designated [directory assistance] and [operator services] locations." Because this proposal would require that WorldCom arrange for the customized routing of its operator services and directory assistance traffic, it does not meet Verizon's obligation to negotiate the actual terms and conditions of that routing in good faith. We therefore reject Verizon's proposed contract language on this issue.

c. Contingency Provisions

(i) Positions of the Parties

537. WorldCom proposes that the interconnection agreement should define Verizon's operator services and directory assistance obligations in the event Verizon's AIN architecture fails to provide customized routing to WorldCom's Feature Group D trunks. WorldCom maintains that contingency provisions are particularly appropriate given Verizon's admission that it has not yet tested AIN routing to Feature Group D trunks. WorldCom also points out that Verizon has not explained how it proposes to provide WorldCom with nondiscriminatory access to operator services and directory assistance in the event AIN routing is unsuccessful. WorldCom argues that its proposed contractual language is reasonable and appropriate.

538. Verizon argues that contingency provisions are unnecessary even if the interconnection agreement addresses customized routing using AIN architecture. Verizon states that it has deployed AIN architecture throughout its Virginia service territory, that it has offered to prove to WorldCom through testing that its AIN network can provide customized routing to

1780 Verizon's November Proposed Agreement to WorldCom, Part C, Additional Services Attach., § 3.2.

1782 WorldCom Brief at 149-50; WorldCom Reply at 132-33.

1783 WorldCom Brief at 150; WorldCom Reply at 133; see Tr. at 615-20, 651-53 (testimony of Verizon witness Woodbury).

1784 WorldCom Brief at 150; see Tr. at 652-53 (testimony of Verizon witness Woodbury).

1785 WorldCom Brief at 149-50. That language would specify that Verizon will use "existing switch features and functions" to route operator services and directory services calls to WorldCom's Feature Group D trunks in the event Verizon's AIN network is unable to provide that routing. WorldCom November Proposed Agreement with Verizon, Part C, Attach. VIII, §§ 6.1.3 & 6.1.4. WorldCom also would have the interconnection agreement state that where Verizon's AIN architecture and existing switches do not allow routing of operator services and directory assistance calls to Feature Group D trunks, the parties, at WorldCom's request, "shall negotiate the terms, conditions, and cost-based rates for providing [operator services and directory assistance] services as unbundled network elements." WorldCom November Proposed Agreement with Verizon, Part C, Attach. VIII, §§ 6.1.3 & 6.1.4. WorldCom proposes, in addition, specific requirements that would apply to Verizon's provision of operator services and directory assistance to WorldCom as UNEs. WorldCom November Proposed Agreement with Verizon, Part C, Attach. VIII, §§ 6.1.3.1 to 6.1.3.3.7.5 & 6.1.4.1 to 6.1.4.10.
WorldCom’s Feature Group D trunks, and that WorldCom has not responded to Verizon’s offer. Verizon asserts that only WorldCom’s continued refusal to help test AIN routing prevents WorldCom from timely receiving that routing. Verizon states that WorldCom’s proposed contract language is outdated and overly detailed. Verizon also states that inclusion of that language in the interconnection agreement “could hinder the progress of collaboratives and industry changes in [operator services and directory assistance] access.”

(ii) Discussion

539. We agree with WorldCom that the interconnection agreement should contain provisions defining Verizon’s operator services and directory assistance obligations in the event Verizon’s AIN architecture does not work as the parties anticipate. We thus accept the contract language WorldCom proposes in this area, subject to the modifications discussed below. While Verizon has tested customized routing using AIN technology in the laboratory, Verizon makes no claim that it has tested whether its AIN architecture will successfully route operator services and directory assistance traffic to Feature Group D trunks. In these circumstances, we find that Verizon has not shown that it is presently able to provide customized routing to those trunks using AIN. Moreover, we find that there is at least a reasonable possibility that AIN routing will fail. Accordingly, consistent with our conclusion above that disputes regarding customized routing provide an appropriate subject matter for an interconnection agreement pursuant to section 251, we also conclude that the agreement should address what happens in the event AIN routing fails.

540. Despite its overall objection to the contingency provisions WorldCom proposes to include in the interconnection agreement, Verizon does not assert that any specific provision is inconsistent with section 251 of the Act or the Commission’s rules implementing that provision. We find no such inconsistency. We therefore require that the parties use WorldCom’s proposed language as a starting point for their final contract language. We anticipate that the parties’

1788 See WorldCom’s November Proposed Agreement to Verizon, Part C, Attach. VIII, §§ 6.1.3 (first sentence to the extent it discusses routing using existing switch features and functions), 6.1.3 (second sentence) through 6.1.3.3.7.5, 6.1.4 (first sentence to the extent it discusses routing using existing switch features and functions), 6.1.4 (remaining sentences) through 6.1.4.10.
1789 Tr. at 652-53 (testimony of Verizon witness Woodbury).
Federal Communications Commission DA 02-1731

final language in this area will retain the substance of WorldCom's proposals while eliminating any cumbersome detail.

19. Issues V-3/V-4-A (UNE-Platform Traffic with Other LECs)

a. Introduction

541. AT&T can offer service to its customers by purchasing from Verizon a combination of unbundled loop, switching and transport elements known as a UNE-platform.\textsuperscript{1792} When a third-party LEC terminates a call from, or originates a call to, an AT&T UNE-platform customer, however, the UNE-platform appears to the third-party LEC to be part of Verizon's network. This presents billing problems. When the third-party LEC terminates AT&T's UNE-platform traffic, it does not know that it should bill AT&T instead of Verizon. Conversely, when the third-party LEC originates a call to AT&T's UNE-platform, it does not know that it should pay AT&T instead of Verizon. With respect to calls that originate on AT&T's UNE-platforms, both parties agree to the status quo in Virginia: Verizon bills AT&T for unbundled switching and common transport, plus a termination charge to recover the third-party LEC's charges for termination.\textsuperscript{1793} The parties differ, however, on the appropriate compensation mechanism for calls that originate on the network of a third-party LEC and terminate to an AT&T customer served over the UNE-platform.\textsuperscript{1794} AT&T proposes that Verizon treat all such calls as Verizon's own traffic.\textsuperscript{1795} Verizon argues that AT&T instead must establish interconnection agreements with third-party LECs for traffic that transits Verizon's network and terminates to AT&T UNE-platform customers. We rule for Verizon and reject AT&T's proposed language.

b. Positions of the Parties

542. Under AT&T's proposal, Verizon, rather than AT&T, would collect reciprocal compensation from the third-party LEC and Verizon would then forfeit its UNE charges.\textsuperscript{1796} AT&T argues that its proposal would minimize the burden of negotiating interconnection agreements among LECs in Virginia, while also relieving Verizon of the responsibility to create

\textsuperscript{1792} See, e.g., Local Competition Third Report and Order, 15 FCC Rcd at 3702-03, para. 12.

\textsuperscript{1793} AT&T Brief at 143-44; Tr. at 552; AT&T Reply at 82; Verizon Unbundled Network Elements (UNE) Reply at 57; cf. Case 01-C-0095, AT&T Petition for Arbitration to Establish an Interconnection Agreement with Verizon, Order Resolving Arbitration Issues, at 47-49 (issued July 30, 2001) (New York Commission AT&T Arbitration Order).

\textsuperscript{1794} We note that the intercarrier compensation for calls between AT&T's UNE-platform customers and Verizon customers is not a point of disagreement in this arbitration.

\textsuperscript{1795} AT&T Brief at 142.

\textsuperscript{1796} Id at 143; AT&T Reply at 82. AT&T's theory is that the reciprocal compensation payment Verizon receives for transport and termination of the third-party LEC's traffic would offset Verizon's UNE transport and switching charges.

268
